<!--
```

```
  Notice the use of %PUBLIC_URL% in the tags above.
```

```
  It will be replaced with the URL of the 'public' folder during the build.
```

```
  Only files inside the 'public' folder can be referenced from the HTML.
```

```
  Unlike "/favicon.ico" or "favicon.ico", "%PUBLIC_URL%/favicon.ico" will  
  work correctly both with client-side routing and a non-root public URL.
```

```
  Learn how to configure a non-root public URL by running 'npm run build'.

  The build step will place the bundled scripts into the <body> tag.
```

```
  To begin the development, run 'npm start' or 'yarn start'.
```

```
  To create a production bundle, use 'npm run build' or 'yarn build'.
